

RISK TABLE

Risk	Impact	Solution
Double voting	Ruins election integrity	Token validation as a token is declared invalid as soon as a vote is cast
Voter Impersonation	Voting on behalf of another individual	2-Factor verification with an OTP sent to the voter's private email.
SQL Injection	Injecting code to delete a database or votes	Validating all input endpoints
Replay Attacks	Resending voter requests many times	Ballot ids that will help verify if a particular token has been used already
Insider Manipulation	The admin changing information in a database	Implementing an audit log that allows post-election verification
Prolonging task deadlines	Affects and drags the project behind schedule	Clearly indicate, tasks and roles and clearly set deadlines
